**Computer and Machine Vision, Fourth Edition: Theory, Algorithms, Practicalities** E. R. Davies

Computer and Machine Vision: Theory, Algorithms, Practicalities (previously entitled Machine Vision) clearly and systematically presents the basic methodology of computer and machine vision, covering the essential elements of the theory while emphasizing algorithmic and practical design constraints. This fully revised fourth edition has brought in more of the concepts and applications of computer vision, making it a very comprehensive and up-to-date tutorial text suitable for graduate students, researchers and R&D engineers working in this vibrant subject.

Key features include:

- Practical examples and case studies give the ‘ins and outs’ of developing real-world vision systems, giving engineers the realities of implementing the principles in practice.
- New chapters containing case studies on surveillance and driver assistance systems give practical methods on these cutting-edge applications in computer vision.
- Necessary mathematics and essential theory are made approachable by careful explanations and well-illustrated examples.
- Updated content and new sections cover topics such as human iris location, image stitching, line detection using RANSAC, performance measures, and hyperspectral imaging.
- The ‘recent developments’ section now included in each chapter will be useful in bringing students and practitioners up to date with the subject.

Roy Davies is Emeritus Professor of Machine Vision at Royal Holloway, University of London. He has worked on many aspects of vision, from feature detection to robust, real-time implementations of practical vision tasks. His interests include automated visual inspection, surveillance, vehicle guidance and crime detection. He has published more than 200 papers, and three books – Machine Vision: Theory, Algorithms, Practicalities (1990), Electronics, Noise and Signal Recovery (1993), and Image Processing for the Food Industry (2000); the first of these has been widely used internationally for more than 20 years, and is now out in this much enhanced fourth edition. Roy holds a DSc at the University of London, and has been awarded Distinguished Fellow of the British Machine Vision Association, and Fellow of the International Association of Pattern Recognition.

- Mathematics and essential theory are made approachable by careful explanations and well-illustrated examples.
- Updated content and new sections cover topics such as human iris location, image stitching, line detection using RANSAC, performance measures, and hyperspectral imaging.
- The ‘recent developments’ section now included in each chapter will be useful in bringing students and practitioners up to date with the subject.

### **From reader reviews:**

#### **Vivian Bennett:**

The reserve untitled Computer and Machine Vision, Fourth Edition: Theory, Algorithms, Practicalities is the reserve that recommended to you to learn. You can see the quality of the e-book content that will be shown to you. The language that article author use to explained their way of doing something is easily to understand. The article author was did a lot of research when write the book, so the information that they share for your requirements is absolutely accurate. You also can get the e-book of Computer and Machine Vision, Fourth Edition: Theory, Algorithms, Practicalities from the publisher to make you considerably more enjoy free time.

#### **Mora Miller:**

Precisely why? Because this Computer and Machine Vision, Fourth Edition: Theory, Algorithms, Practicalities is an unordinary book that the inside of the e-book waiting for you to snap that but latter it will surprise you with the secret that inside. Reading this book adjacent to it was fantastic author who else write the book in such incredible way makes the content interior easier to understand, entertaining approach but still convey the meaning completely. So , it is good for you because of not hesitating having this any more or you going to regret it. This excellent book will give you a lot of advantages than the other book include such as help improving your proficiency and your critical thinking way. So , still want to postpone having that book? If I have been you I will go to the book store hurriedly.

#### **Julie Ross:**

As we know that book is very important thing to add our know-how for everything. By a book we can know everything you want. A book is a range of written, printed, illustrated or perhaps blank sheet. Every year seemed to be exactly added. This e-book Computer and Machine Vision, Fourth Edition: Theory, Algorithms, Practicalities was filled about science. Spend your extra time to add your knowledge about your scientific disciplines competence. Some people has distinct feel when they reading the book. If you know how big advantage of a book, you can experience enjoy to read a reserve. In the modern era like now, many ways to get book which you wanted.

#### **Donna Canales:**

As a scholar exactly feel bored for you to reading. If their teacher questioned them to go to the library as well as to make summary for some book, they are complained. Just very little students that has reading's spirit or real their leisure activity. They just do what the professor want, like asked to go to the library. They go to at this time there but nothing reading really. Any students feel that looking at is not important, boring as well as can't see colorful pictures on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. So , this Computer and Machine Vision, Fourth Edition: Theory, Algorithms,

Practicalities can make you truly feel more interested to read.
