Robert B. Laughlin

Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow Robert B. Laughlin

In *Powering the Future*, Nobel laureate Robert B. Laughlin transports us two centuries into the future, when we've ceased to use carbon from the ground—either because humans have banned carbon burning or because fuel has simply run out. Boldly, Laughlin predicts no earth-shattering transformations will have taken place. Six generations from now, there will still be soccer moms, shopping malls, and business trips. Firesides will still be snug and warm.

How will we do it? Not by discovering a magic bullet to slay our energy problems, but through a slew of fascinating technologies, drawing on wind, water, and fire. *Powering the Future* is an objective yet optimistic tour through alternative fuel sources, set in a world where we've burned every last drop of petroleum and every last shovelful of coal.

The Predictable:

Fossil fuels will run out. The present flow of crude oil out of the ground equals in one day the average flow of the Mississippi River past New Orleans in thirteen minutes. If you add the energy equivalents of gas and coal, it's thirty-six minutes. At the present rate of consumption, we'll be out of fossil fuels in two centuries' time.

We always choose the cheapest gas. From the nineteenth-century consolidation of the oil business to the California energy crisis of 2000-2001, the energy business has shown, time and again, how low prices dominate market share. Market forces—not green technology—will be the driver of energy innovation in the next 200 years.

The laws of physics remain fixed. Energy will still be conserved, degrade entropically with use, and have to be disposed of as waste heat into outer space. How much energy a fuel can pack away in a given space is fixed by quantum mechanics—and if we want to keep flying jet planes, we will need carbon-based fuels.

The Potential:

Animal waste. If dried and burned, the world's agricultural manure would supply about one-third as much energy as all the coal we presently consume.

Trash. The United States disposes of 88 million tons of carbon in its trash per year. While the incineration of waste trash is not enough to contribute meaningfully to the global demand for energy, it will constrain fuel prices by providing a cheap supply of carbon.

Solar energy. The power used to light all the cities around the world is only one-millionth of the total power of sunlight pouring down on earth's daytime side. And the amount of hydropump storage required to store the world's daily electrical surge is equal to only eight times the volume of Lake Mead.

PRAISE FOR ROBERT B. LAUGHLIN

“Perhaps the most brilliant theoretical physicist since Richard Feynman”

—George Chapline, Lawrence Livermore National Laboratory

“Powerful but controversial.”

— *Financial Times*

“[Laughlin’s] company ... is inspirational.”

—*New Scientist*

From reader reviews:

Jake Leslie:

The publication with title Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow possesses a lot of information that you can discover it. You can get a lot of benefit after read this book. This specific book exist new expertise the information that exist in this guide represented the condition of the world now. That is important to yo7u to find out how the improvement of the world. This particular book will bring you throughout new era of the internationalization. You can read the e-book with your smart phone, so you can read it anywhere you want.

Corrine Switzer:

People live in this new morning of lifestyle always try and and must have the spare time or they will get great deal of stress from both daily life and work. So , when we ask do people have spare time, we will say absolutely indeed. People is human not only a robot. Then we consult again, what kind of activity do you possess when the spare time coming to an individual of course your answer will certainly unlimited right. Then do you try this one, reading guides. It can be your alternative in spending your spare time, the book you have read will be Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow.

Lillian Albrecht:

Many people spending their time by playing outside having friends, fun activity using family or just watching TV the whole day. You can have new activity to invest your whole day by looking at a book. Ugh, think reading a book really can hard because you have to use the book everywhere? It ok you can have the e-book, bringing everywhere you want in your Mobile phone. Like Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow which is getting the e-book version. So , try out this book? Let's view.

Barbra Walker:

Don't be worry should you be afraid that this book can filled the space in your house, you could have it in e-book way, more simple and reachable. This kind of Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow can give you a lot of close friends because by you considering this one book you have thing that they don't and make you actually more like an interesting person. This particular book can be one of a step for you to get success. This guide offer you information that probably your friend doesn't understand, by knowing more than different make you to be great individuals. So , why hesitate? Let me have Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow.
