Data Modeling Made Simple with ER/Studio Data Architect

Steve Hoberman

Data Modeling Made Simple with ER/Studio Data Architect Steve Hoberman

Data Modeling Made Simple with ER/Studio Data Architect will provide the business or IT professional with a practical working knowledge of data modeling concepts and best practices, along with how to apply these principles with ER/Studio. You'll build many ER/Studio data models along the way, applying best practices to master these ten objectives:

- 1. You will know why a data model is needed and which ER/Studio models are the most appropriate for each situation
- 2. You will be able to read a data model of any size and complexity with the same confidence as reading a book
- 3. You will know how to apply all the key features of ER/Studio
- 4. You will be able to build relational and dimensional conceptual, logical, and physical data models in ER/Studio
- 5. You will be able to apply techniques such as indexing, transforms, and forward engineering to turn a logical data model into an efficient physical design
- 6. You will improve data model quality and impact analysis results by leveraging ER/Studio's lineage functionality and compare/merge utility
- 7. You will achieve enterprise architecture through ER/Studio's repository and portal functionality
- 8. You will be able to apply ER/Studio's data dictionary features
- 9. You will learn ways of sharing the data model through reporting and through exporting the model in a variety of formats
- 10. You will leverage ER/Studio's naming functionality to improve naming consistency

This book contains four sections:

Section I introduces data modeling and the ER/Studio landscape. Learn why data modeling is so critical to software development and even more importantly, why data modeling is so critical to understanding the business. You will also learn about the ER/Studio environment. By the end of this section, you will have created and saved your first data model in ER/Studio and be ready to start modeling in Section II!

Section II explains all of the symbols and text on a data model, including entities, attributes, relationships, domains, and keys. By the time you finish this section, you will be able to 'read' a data model of any size or complexity, and create a complete data model in ER/Studio.

Section III explores the three different levels of models: conceptual, logical, and physical. A conceptual data model (CDM) represents a business need within a defined scope. The logical data model (LDM) represents a detailed business solution, capturing the business requirements without complicating the model with implementation concerns such as software and hardware. The physical data model (PDM) represents a detailed technical solution. The PDM is the logical data model compromised often to improve performance or usability. The PDM makes up for deficiencies in our technology. By the end of this section you will be able to create conceptual, logical, and physical data models in ER/Studio.

Section IV discusses additional features of ER/Studio. These features include data dictionary, data lineage, automating tasks, repository and portal, exporting and reporting, naming standards, and compare and merge functionality.

From reader reviews:

Patrick Adkins:

Book is to be different for every grade. Book for children until eventually adult are different content. To be sure that book is very important for us. The book Data Modeling Made Simple with ER/Studio Data Architect ended up being making you to know about other expertise and of course you can take more information. It is rather advantages for you. The book Data Modeling Made Simple with ER/Studio Data Architect is not only giving you more new information but also to become your friend when you experience bored. You can spend your personal spend time to read your e-book. Try to make relationship together with the book Data Modeling Made Simple with ER/Studio Data Architect. You never really feel lose out for everything should you read some books.

Scott Halpin:

Would you one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Make an effort to pick one book that you just dont know the inside because don't evaluate book by its handle may doesn't work this is difficult job because you are afraid that the inside maybe not since fantastic as in the outside search likes. Maybe you answer could be Data Modeling Made Simple with ER/Studio Data Architect why because the excellent cover that make you consider with regards to the content will not disappoint a person. The inside or content is fantastic as the outside or cover. Your reading 6th sense will directly assist you to pick up this book.

Ruben Jenkins:

Beside this kind of Data Modeling Made Simple with ER/Studio Data Architect in your phone, it could give you a way to get nearer to the new knowledge or information. The information and the knowledge you may got here is fresh through the oven so don't possibly be worry if you feel like an previous people live in narrow town. It is good thing to have Data Modeling Made Simple with ER/Studio Data Architect because this book offers to you personally readable information. Do you at times have book but you don't get what it's exactly about. Oh come on, that will not happen if you have this in the hand. The Enjoyable agreement here cannot be questionable, such as treasuring beautiful island. Techniques you still want to miss it? Find this book and read it from at this point!

Donna Layne:

Do you like reading a book? Confuse to looking for your selected book? Or your book seemed to be rare? Why so many problem for the book? But virtually any people feel that they enjoy for reading. Some people likes studying, not only science book but also novel and Data Modeling Made Simple with ER/Studio Data Architect or even others sources were given knowledge for you. After you know how the fantastic a book, you feel would like to read more and more. Science publication was created for teacher or maybe students especially. Those textbooks are helping them to include their knowledge. In some other case, beside science

reserve, any other book likes Data Modeling Made Simple with ER/Studio Data Architect to make your spare time considerably more colorful. Many types of book like here.
